**DETAILED ACTION**

Claims 1-19 are currently pending.

***Election/Restrictions***

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Groups 1-4, claim(s) 1-10, drawn to siRNA molecules of the specific sequence identified by SEQ ID NOS: 3, 8, 13, 1 or 16, placed in Groups 1-4 respectively.

Group 5, claim(s) 11-14, 16-18, drawn to method of reducing the level of BACE1 protein in a cell or treating Alzheimer's disease.

Group 6, claim(s) 11-14, 19, and 20, drawn to methods of reducing the level of BACE1 protein in a cell or protecting a cell against stress.

Group 7, claim(s) 15, drawn to a method for preparing a pharmaceutical composition comprising an siRNA directed to BACE1.

The inventions of Groups 1-4, 5, 6, and 7 share a special technical feature of a siRNA sequence directed against SEQ ID NO: 1. This restriction is required in view of WO/03/070895 (see IDS), which discloses siRNA against SEQ ID NO: 1, thus demonstrating that the common special technical feature is not a contribution to the prior art.

Regarding individual sequences, this international searching authority considers that the international application does not comply with the requirements of unity of invention (Rules 13.1, 13.2, and 13.3) for the reasons indicated below:

According to the guidelines in Section (f)(i)(a) of Annex B of the PCT Administrative Instructions, the special technical feature as defined by PCT Rule 13.2 shall be considered to be met when all the alternatives of a Markush-group are of similar nature. For chemical alternatives, such as the claimed sequences, the Markush group shall be regarded as being of similar nature when

Art Unit: 1635

- (A) all alternatives have a common property or activity and
- (B)(1) a common structure is present, i.e, a significant structure is shared by all of the alternatives or
- (B)(2) in cases where the common structure cannot be the unifying criteria, all alternatives belong to an art recognized class of compounds in the art to which the invention pertains.

The instant sequences of Groups 1-4 are considered to be each separate inventions for the following reasons:

The sequences do not meet the criteria of (A), common property or activity or (B)(2), art recognized class of compounds. The sequences each behave in a different way in the context of the claimed invention. Each member of the class cannot be substituted, one for the other, with the expectation that the same intended result would be achieved.

Further, the sequences do not meet the criteria of (B)(1), as they do not share, one with another, a common core structure. Accordingly, unity of invention between the antisense sequences is lacking and each sequence claimed is considered to constitute a special technical feature. Applicants are directed to elect a single sequence that correspond to Groups 1-4 for examination.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
